PROFESSIONAL SUMMARY

Full-stack software engineer building AI-enabled product systems with Python, TypeScript, Node.js, React, PostgreSQL, and MCP. Owns cross-repo features from agent contracts and backend authorization through frontend review flows and production observability.

WORK EXPERIENCE

Outbuild | Software Engineer | Remote | September 2022 - Present

- Owned the Lookahead Task Pre-Fill flow across Python, Node.js, and React: generated typed, grounded proposals, enforced trusted activity scope, and kept persistence behind explicit approval.
- Built consolidated Lookahead and MCP workflows for schedule reuse, task and roadblock generation, and confirmed application, with deterministic scope resolution, idempotency, and receipt behavior.
- Designed CoBuilder proposal flows for task, roadblock, hierarchy, clone, bulk, and tag operations, with permission checks and review-before-write safeguards.
- Defined LangSmith trace schemas and evaluation gates with agent routing, grounding and tool-selection coverage, feedback, token and latency metrics, and regression checks.
- Led the ongoing React 19 and TanStack Query migration across 552 files while preserving QA behavior, PDF exports, and dependency compatibility.
- Hardened the platform with Procure and Agave integrations, multi-tenant access validation, Sentry tracing, Redis and ElastiCache performance work, and WebSocket progress updates for 3,000+ activities.

Loft MX | Semi Senior Full Stack Developer (Part-time Freelance) | Remote | May 2022 - July 2022

- Added Django REST endpoints, PostgreSQL migrations, and React integration across 50+ components for a full-stack rebranding initiative.
- Implemented MessageBird SMS and WhatsApp webhooks with Celery and Redis queueing, reducing notification costs by 25%; reduced Docker build time from 10 minutes to 2 minutes.

Fractal | Frontend Developer | Remote | December 2021 - April 2022

- Developed a React and TypeScript API testing portal used by 20+ internal developers, reducing API debugging time by 30%.
- Built and published the fractalcore component library as a private NPM package adopted by 3+ teams, reducing duplicate UI code by 40%.
- Improved frontend performance, internationalization, Storybook coverage, and Webpack bundle size through reusable hooks, lazy loading, code splitting, and dependency cleanup.

Ambit Technology | Full Stack Developer | Remote | May 2021 - November 2021

- Improved an ERP integration using REST APIs and message queues, reducing data-entry errors from 15% to 3%.
- Built Python automation on AWS Lambda for 10,000+ daily records, reducing batch processing time by five hours through parallel execution.
- Built a React and Node.js MVP informed by user research, increasing retention by 15%.

AWARDS

Developer of the Year - Outbuild, 2024

Developer of the Year - Outbuild, 2023

PROJECTS

Booking UI - Platzi Master

Built a booking-style web application in a Lerna monorepo with reusable packages for booking, search, places, geolocation, messaging, and administration.

SKILLS

Languages: TypeScript, JavaScript, Python | Frontend: React, Redux, Next.js, Storybook, Material UI | Backend: Node.js, Express.js, Django, REST APIs, WebSocket, OAuth 2.0 | Data: PostgreSQL, MongoDB, Redis, Sequelize, multi-tenant systems | Cloud and tooling: AWS ECS, Lambda, ElastiCache, Docker, Git, CI/CD, Jest, Sentry, LangSmith | Integrations: Procure, Autodesk, Trimble, MessageBird, i18next | AI: MCP, AI agent harnesses, LLM evaluation, prompt pipelines

LANGUAGES

Spanish: Native | English: B2 (Professional Working Proficiency)
